

Body Count

the True Cost of Pandemic Policy

By Craig Paardekooper

1 : 40% increase in all-cause-mortality in USA for 18-49 year olds in 2021

Several sources, including life insurance companies, report a 40% increase in all-cause mortality in the USA for 18-49 year olds.

[There was an unexpected 40% increase in 'all cause deaths' in 2021 - \(kusi.com\)](#)

2 : A 40% increase in all-cause-mortality = extra 289.44 deaths per 100,000 population

In 2018, prior to this increase, the all- cause-mortality rate amongst the entire population was 723.6 deaths per 100,000 population.

[Death rates for all causes U.S. 1950-2018 | Statista](#)

Let us assume the same mortality rate applies to the sub group comprising 18-49 year olds, as it does to the entire population. 40% of this mortality rate is 289.44 deaths per 100,000 population.

3 : USA population of 18-49 year olds is 130 million

4 : Number of deaths necessary to create this increase in all-cause-mortality is 376,272

Number of excess deaths required to produce a 40% increase in all cause mortality in 18-49 year olds in the USA =

$$289.44 \times 130,000,000 / 100,000 = 376,272 \text{ deaths}$$

5. Conclusion

The excess body count amongst 18-49 year olds in the USA is

376,272 dead (18-49 year olds)

(Note that this is only the body count for 18-49 year olds. In addition to this there will be separate body counts for the young and the aged.)

Vaccination as a Contributing Cause

It is unlikely that this increase in all-cause-mortality was caused solely by the Covid 19 vaccines, since many additional causes of death are apparent.

There was a 13.6% increase in all-cause mortality in 2020, before the COVID vaccines arrived. In 2021 this increase persisted at a slightly higher level of 16.4%, due mostly to the persistence of the same causes of death active in 2020 -

- Release of a virus / bio-weapon (Covid 19)
- Suspension of medical care during lockdown
- suppression of preventative medicines such as hydroxychloroquine and ivermectin
- Use of dangerous medicines such Remdesivir. Medazolam
- Use of ventilators
- DNR orders
- Suicides due to lockdown, fear induction, isolation, poverty, restrictions, loss of job
- Rollout of toxic COVID vaccines in late 2020
- Rollout of possibly toxic flu vaccines in 2020
- Blocking of breathing with masks
- Imposed isolation

It is unknown how much the vaccines have contributed to the increase in mortality, but we do know that there were 411,615 excess deaths in 2020 before the COVID vaccine rollout, (though the “flu vaccine” released in 2020 may have led to many deaths.)

In 2021 there were 485,945 excess deaths.

The difference in mortality between 2020 and 2021 amounts to 74,330 deaths in the USA

The total number of excess deaths from start of 2020 till present = 1,000,000 = approximately 40% increase in all-cause mortality. (See notes in References)

Conclusion

1,000,000 excess deaths in USA were due to Government policy -

- Releasing pathogens
- Imposing harmful restrictions
- Coercing dangerous treatments aka vaccines for COVID / Flu etc

It is 100% certain that the increase in all-cause mortality is due to Government policy..

Covid Vaccines definitely contributed to this, but cannot account for more than 485,945 excess deaths, since this is the total excess death during 2021.

By the end of 2021, 220 million people were vaccinated in the USA, so the death rate from vaccination cannot exceed $485,945/220,000,000$, i.e. 1 person for every 452 vaccinated.

Given the presence of many other factors producing death, it is certain that the rate of death from Covid vaccines is less than 1 in 452.

Reference : [Excess Deaths \(Absolute\) - US Mortality Monitoring](#)

United States reported 3,440,574 deaths of all ages for the year 2020. Expected deaths were 3,028,959. That is an increase of 411,615 deaths (+13.6%).

United States reported 3,457,397 deaths of all ages for the year 2021. Expected deaths were 2,971,452. That is an increase of 485,945 deaths (+16.4%).

To date, for the year 2022, United States reported 1,532,009 deaths of all ages. Expected deaths thus far, were 1,408,536. That is an increase of 123,473 deaths (+8.8%).

There was

- a 13.6% increase in deaths in 2020 above expected,
- a 16.4% increase in 2021,
- an 8.8% increase in 2022,

Total = 38.8% increase = 1,000,000 excess deaths
